

Package ‘broom.helpers’

September 30, 2021

Title Helpers for Model Coefficients Tibbles

Version 1.4.0

Description Provides suite of functions to work with regression model 'broom::tidy()' tibbles. The suite includes functions to group regression model terms by variable, insert reference and header rows for categorical variables, add variable labels, and more.

License GPL-3

URL <https://larmarange.github.io/broom.helpers/>

BugReports <https://github.com/larmarange/broom.helpers/issues>

Imports broom, cli, dplyr, labelled, lifecycle, purrr, rlang, stats, stringr, tibble, tidyr

Suggests brms (>= 2.13.0), broom.mixed, cmprsk, covr, datasets, emmeans, lfe, forcats, gam, gee, geopack, ggplot2, glmmTMB, glue, gt, gtsummary, knitr, lavaan, lme4, MASS, mgcv, mice, nnet, ordinal, parameters, rmarkdown, rstanarm, spelling, survey, survival, testthat, VGAM

VignetteBuilder knitr

RdMacros lifecycle

Encoding UTF-8

RoxygenNote 7.1.2

Language en-US

NeedsCompilation no

.clean_backticks *Remove backticks around variable names*

Description

Remove backticks around variable names

Usage

```
.clean_backticks(x, variable_names = x)
```

Arguments

x a character vector to be cleaned
variable_names list of variable names, could be obtained with [model_list_variables\(only_variable = TRUE\)](#) to properly take into account interaction only terms/variables

See Also

Other other_helpers: [.escape_regex\(\)](#)

.escape_regex *Escapes any characters that would have special meaning in a regular expression*

Description

This functions has been adapted from `Hmisc:::escapeRegex()`

Usage

```
.escape_regex(string)
```

Arguments

string a character vector

See Also

Other other_helpers: [.clean_backticks\(\)](#)

```
.formula_list_to_named_list
```

Convert formula selector to a named list

Description

Functions takes a list of formulas, e.g. `list(starts_with("age") ~ "continuous")`, and returns a named list, e.g. `list(age = "continuous")`.

Usage

```
.formula_list_to_named_list(
  x,
  data = NULL,
  var_info = NULL,
  arg_name = NULL,
  select_single = FALSE
)
```

Arguments

<code>x</code>	list of selecting formulas
<code>data</code>	A data frame to select columns from. Default is NULL
<code>var_info</code>	A data frame of variable names and attributes. May also pass a character vector of variable names. Default is NULL
<code>arg_name</code>	Optional string indicating the source argument name. This helps in the error messaging. Default is NULL.
<code>select_single</code>	Logical indicating whether the result must be a single variable. Default is FALSE

```
.generic_selector
```

Generate a custom selector function

Description

Generate a custom selector function

Usage

```
.generic_selector(variable_column, select_column, select_expr, fun_name)
```

Arguments

variable_column string indicating column variable names are stored

select_column character vector of columns used in the select_expr= argument

select_expr unquoted predicate command to subset a data frame to select variables

fun_name quoted name of function where .generic_selector() is being used. This helps with error messaging.

Value

custom selector functions

.select_to_varnames	<i>Variable selector</i>
---------------------	--------------------------

Description

Function takes select()-like inputs and converts the selector to a character vector of variable names. Functions accepts tidyselect syntax, and additional selector functions defined within the package

Usage

```
.select_to_varnames(
  select,
  data = NULL,
  var_info = NULL,
  arg_name = NULL,
  select_single = FALSE
)
```

Arguments

select A single object selecting variables, e.g. c(age, stage), starts_with("age")

data A data frame to select columns from. Default is NULL

var_info A data frame of variable names and attributes. May also pass a character vector of variable names. Default is NULL

arg_name Optional string indicating the source argument name. This helps in the error messaging. Default is NULL.

select_single Logical indicating whether the result must be a single variable. Default is FALSE

Value

A character vector of variable names

```
model_compute_terms_contributions
```

Compute a matrix of terms contributions

Description

Used for `model_get_n()`. For each row and term, equal 1 if this row should be taken into account in the estimate of the number of observations, 0 otherwise.

Usage

```
model_compute_terms_contributions(model)
```

```
## Default S3 method:
```

```
model_compute_terms_contributions(model)
```

Arguments

```
model          a model object
```

Details

This function does not cover lavaan models (NULL is returned).

Other model_helpers: `model_get_assign()`, `model_get_coefficients_type()`, `model_get_contrasts()`, `model_get_model_frame()`, `model_get_model_matrix()`, `model_get_model()`, `model_get_nlevels()`, `model_get_n()`, `model_get_offset()`, `model_get_response()`, `model_get_terms()`, `model_get_weights()`, `model_get_xlevels()`, `model_identify_variables()`, `model_list_contrasts()`, `model_list_terms_levels()`, `model_list_variables()`

Examples

```
mod <- lm(Sepal.Length ~ Sepal.Width, iris)
mod %>% model_compute_terms_contributions()

mod <- lm(hp ~ mpg + factor(cyl) + disp:hp, mtcars)
mod %>% model_compute_terms_contributions()

mod <- glm(
  response ~ stage * grade + trt,
  gtsummary::trial,
  family = binomial,
  contrasts = list(
    stage = contr.sum,
    grade = contr.treatment(3, 2),
    trt = "contr.SAS"
  )
)
```

```

)
mod %>% model_compute_terms_contributions()

mod <- glm(
  response ~ stage * trt,
  gtsummary::trial,
  family = binomial,
  contrasts = list(stage = contr.poly)
)
mod %>% model_compute_terms_contributions()

mod <- glm(
  Survived ~ Class * Age + Sex,
  data = Titanic %>% as.data.frame(),
  weights = Freq, family = binomial
)
mod %>% model_compute_terms_contributions()

d <- dplyr::as_tibble(Titanic) %>%
  dplyr::group_by(Class, Sex, Age) %>%
  dplyr::summarise(
    n_survived = sum(n * (Survived == "Yes")),
    n_dead = sum(n * (Survived == "No"))
  )
mod <- glm(cbind(n_survived, n_dead) ~ Class * Age + Sex, data = d, family = binomial)
mod %>% model_compute_terms_contributions()

```

model_get_assign

Get the assign attribute of model matrix of a model

Description

Return the assign attribute attached to the object returned by `stats::model.matrix()`.

Usage

```

model_get_assign(model)

## Default S3 method:
model_get_assign(model)

## S3 method for class 'vglm'
model_get_assign(model)

```

Arguments

model a model object

See Also

`stats::model.matrix()`

Other `model_helpers`: `model_compute_terms_contributions()`, `model_get_coefficients_type()`, `model_get_contrasts()`, `model_get_model_frame()`, `model_get_model_matrix()`, `model_get_model()`, `model_get_nlevels()`, `model_get_n()`, `model_get_offset()`, `model_get_response()`, `model_get_terms()`, `model_get_weights()`, `model_get_xlevels()`, `model_identify_variables()`, `model_list_contrasts()`, `model_list_terms_levels()`, `model_list_variables()`

Examples

```
lm(hp ~ mpg + factor(cyl), mtcars) %>%
  model_get_assign()
```

```
model_get_coefficients_type
  Get coefficient type
```

Description

Indicate the type of coefficient among "generic", "logistic", "poisson", "relative_risk" or "prop_hazard".

Usage

```
model_get_coefficients_type(model)

## Default S3 method:
model_get_coefficients_type(model)

## S3 method for class 'glm'
model_get_coefficients_type(model)

## S3 method for class 'negbin'
model_get_coefficients_type(model)

## S3 method for class 'geeglm'
model_get_coefficients_type(model)

## S3 method for class 'glmerMod'
model_get_coefficients_type(model)

## S3 method for class 'clogit'
model_get_coefficients_type(model)

## S3 method for class 'polr'
model_get_coefficients_type(model)
```

```
## S3 method for class 'multinom'
model_get_coefficients_type(model)

## S3 method for class 'svyolr'
model_get_coefficients_type(model)

## S3 method for class 'clm'
model_get_coefficients_type(model)

## S3 method for class 'clmm'
model_get_coefficients_type(model)

## S3 method for class 'coxph'
model_get_coefficients_type(model)
```

Arguments

model a model object

See Also

Other model_helpers: [model_compute_terms_contributions\(\)](#), [model_get_assign\(\)](#), [model_get_contrasts\(\)](#), [model_get_model_frame\(\)](#), [model_get_model_matrix\(\)](#), [model_get_model\(\)](#), [model_get_nlevels\(\)](#), [model_get_n\(\)](#), [model_get_offset\(\)](#), [model_get_response\(\)](#), [model_get_terms\(\)](#), [model_get_weights\(\)](#), [model_get_xlevels\(\)](#), [model_identify_variables\(\)](#), [model_list_contrasts\(\)](#), [model_list_terms_levels\(\)](#), [model_list_variables\(\)](#)

Examples

```
lm(hp ~ mpg + factor(cyl), mtcars) %>%
  model_get_coefficients_type()

Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes"))) %>%
  glm(Survived ~ Class + Age * Sex, data = ., weights = .$n, family = binomial) %>%
  model_get_coefficients_type()
```

model_get_contrasts *Get contrasts used in the model*

Description

Get contrasts used in the model

Usage

```
model_get_contrasts(model)
```

Arguments

model a model object

See Also

Other model_helpers: `model_compute_terms_contributions()`, `model_get_assign()`, `model_get_coefficients_type()`, `model_get_model_frame()`, `model_get_model_matrix()`, `model_get_model()`, `model_get_nlevels()`, `model_get_n()`, `model_get_offset()`, `model_get_response()`, `model_get_terms()`, `model_get_weights()`, `model_get_xlevels()`, `model_identify_variables()`, `model_list_contrasts()`, `model_list_terms_levels()`, `model_list_variables()`

Examples

```
glm(
  am ~ mpg + factor(cyl),
  data = mtcars,
  family = binomial,
  contrasts = list(`factor(cyl)` = contr.sum)
) %>%
  model_get_contrasts()
```

model_get_model	<i>Get the model from model objects</i>
-----------------	---

Description

Most model objects are proper R model objects. There are, however, some model objects that store the proper object internally (e.g. mice models). This function extracts that model object in those cases.

Usage

```
model_get_model(model)

## Default S3 method:
model_get_model(model)

## S3 method for class 'mira'
model_get_model(model)
```

Arguments

model a model object

See Also

Other `model_helpers`: `model_compute_terms_contributions()`, `model_get_assign()`, `model_get_coefficients_type`, `model_get_contrasts()`, `model_get_model_frame()`, `model_get_model_matrix()`, `model_get_nlevels()`, `model_get_n()`, `model_get_offset()`, `model_get_response()`, `model_get_terms()`, `model_get_weights()`, `model_get_xlevels()`, `model_identify_variables()`, `model_list_contrasts()`, `model_list_terms_levels()`, `model_list_variables()`

Examples

```
lm(hp ~ mpg + factor(cyl), mtcars) %>%
  model_get_model()
```

`model_get_model_frame` *Get the model frame of a model*

Description

The structure of the object returned by `stats::model.frame()` could slightly differ for certain types of models. `model_get_model_frame()` will always return an object with the same data structure or NULL if it is not possible to compute model frame from model.

Usage

```
model_get_model_frame(model)

## Default S3 method:
model_get_model_frame(model)

## S3 method for class 'coxph'
model_get_model_frame(model)

## S3 method for class 'survreg'
model_get_model_frame(model)
```

Arguments

`model` a model object

See Also

`stats::model.frame()`

Other `model_helpers`: `model_compute_terms_contributions()`, `model_get_assign()`, `model_get_coefficients_type`, `model_get_contrasts()`, `model_get_model_matrix()`, `model_get_model()`, `model_get_nlevels()`, `model_get_n()`, `model_get_offset()`, `model_get_response()`, `model_get_terms()`, `model_get_weights()`, `model_get_xlevels()`, `model_identify_variables()`, `model_list_contrasts()`, `model_list_terms_levels()`, `model_list_variables()`

Examples

```
lm(hp ~ mpg + factor(cyl), mtcars) %>%
  model_get_model_frame() %>%
  head()
```

```
model_get_model_matrix
```

Get the model matrix of a model

Description

The structure of the object returned by `stats::model.matrix()` could slightly differ for certain types of models. `model_get_model_matrix()` will always return an object with the same structure as `stats::model.matrix.default()`.

Usage

```
model_get_model_matrix(model, ...)
```

```
## Default S3 method:
```

```
model_get_model_matrix(model, ...)
```

```
## S3 method for class 'multinom'
```

```
model_get_model_matrix(model, ...)
```

```
## S3 method for class 'clm'
```

```
model_get_model_matrix(model, ...)
```

```
## S3 method for class 'brmsfit'
```

```
model_get_model_matrix(model, ...)
```

```
## S3 method for class 'glmmTMB'
```

```
model_get_model_matrix(model, ...)
```

Arguments

```
model          a model object
```

```
...           additional arguments passed to stats::model.matrix()
```

Details

For models fitted with `glmmTMB::glmmTMB()`, it will return a model matrix taking into account all components ("cond", "zi" and "disp"). For a more restricted model matrix, please refer to `glmmTMB::model.matrix.glmmTMB()`.

See Also

`stats::model.matrix()`

Other `model_helpers`: `model_compute_terms_contributions()`, `model_get_assign()`, `model_get_coefficients_type()`, `model_get_contrasts()`, `model_get_model_frame()`, `model_get_model()`, `model_get_nlevels()`, `model_get_n()`, `model_get_offset()`, `model_get_response()`, `model_get_terms()`, `model_get_weights()`, `model_get_xlevels()`, `model_identify_variables()`, `model_list_contrasts()`, `model_list_terms_levels()`, `model_list_variables()`

Examples

```
lm(hp ~ mpg + factor(cyl), mtcars) %>%
  model_get_model_matrix() %>%
  head()
```

model_get_n

Get the number of observations

Description

For binomial and multinomial logistic models, will also return the number of events.

Usage

```
model_get_n(model)

## Default S3 method:
model_get_n(model)

## S3 method for class 'glm'
model_get_n(model)

## S3 method for class 'gam'
model_get_n(model)

## S3 method for class 'glmerMod'
model_get_n(model)

## S3 method for class 'multinom'
model_get_n(model)

## S3 method for class 'coxph'
model_get_n(model)

## S3 method for class 'survreg'
model_get_n(model)
```

Arguments

model a model object

Details

For Poisson models, will return the number of events and exposure time (defined with `stats::offset()`).

For Cox models (`survival::coxph()`), will return the number of events and exposure time.

See `tidy_add_n()` for more details.

The total number of observations (`N_obs`), of events (`N_event`) and of exposure time (`Exposure`) are stored as attributes of the returned tibble.

This function does not cover lavaan models (NULL is returned).

Other `model_helpers`: `model_compute_terms_contributions()`, `model_get_assign()`, `model_get_coefficients_type()`, `model_get_contrasts()`, `model_get_model_frame()`, `model_get_model_matrix()`, `model_get_model()`, `model_get_nlevels()`, `model_get_offset()`, `model_get_response()`, `model_get_terms()`, `model_get_weights()`, `model_get_xlevels()`, `model_identify_variables()`, `model_list_contrasts()`, `model_list_terms_levels()`, `model_list_variables()`

Examples

```
lm(hp ~ mpg + factor(cyl) + disp:hp, mtcars) %>%
  model_get_n()

mod <- glm(
  response ~ stage * grade + trt,
  gtsummary::trial,
  family = binomial,
  contrasts = list(stage = contr.sum, grade = contr.treatment(3, 2), trt = "contr.SAS")
)
mod %>% model_get_n()

mod <- glm(
  Survived ~ Class * Age + Sex, data = Titanic %>% as.data.frame(),
  weights = Freq, family = binomial
)
mod %>% model_get_n()

d <- dplyr::as_tibble(Titanic) %>%
  dplyr::group_by(Class, Sex, Age) %>%
  dplyr::summarise(
    n_survived = sum(n * (Survived == "Yes")),
    n_dead = sum(n * (Survived == "No"))
  )
mod <- glm(cbind(n_survived, n_dead) ~ Class * Age + Sex, data = d, family = binomial)
mod %>% model_get_n()

mod <- glm(response ~ age + grade * trt, gtsummary::trial, family = poisson)
mod %>% model_get_n()
```

```
mod <- glm(
  response ~ trt * grade + offset(ttdeath),
  gtsummary::trial,
  family = poisson
)
mod %>% model_get_n()

df <- survival::lung %>% dplyr::mutate(sex = factor(sex))
mod <- survival::coxph(survival::Surv(time, status) ~ ph.ecog + age + sex, data = df)
mod %>% model_get_n()

mod <- lme4::lmer(Reaction ~ Days + (Days | Subject), lme4::sleepstudy)
mod %>% model_get_n()

mod <- lme4::glmer(response ~ trt * grade + (1 | stage),
  family = binomial, data = gtsummary::trial
)
mod %>% model_get_n()

mod <- lme4::glmer(cbind(incidence, size - incidence) ~ period + (1 | herd),
  family = binomial, data = lme4::cbpp
)
mod %>% model_get_n()
```

model_get_nlevels	<i>Get the number of levels for each factor used in xlevels</i>
-------------------	---

Description

Get the number of levels for each factor used in xlevels

Usage

```
model_get_nlevels(model)
```

```
## Default S3 method:
model_get_nlevels(model)
```

Arguments

model a model object

Value

a tibble with two columns: "variable" and "var_nlevels"

See Also

Other `model_helpers`: `model_compute_terms_contributions()`, `model_get_assign()`, `model_get_coefficients_type()`, `model_get_contrasts()`, `model_get_model_frame()`, `model_get_model_matrix()`, `model_get_model()`, `model_get_n()`, `model_get_offset()`, `model_get_response()`, `model_get_terms()`, `model_get_weights()`, `model_get_xlevels()`, `model_identify_variables()`, `model_list_contrasts()`, `model_list_terms_levels()`, `model_list_variables()`

Examples

```
lm(hp ~ mpg + factor(cyl), mtcars) %>%
  model_get_nlevels()
```

model_get_offset	<i>Get model offset</i>
------------------	-------------------------

Description

This function does not cover lavaan models (NULL is returned).

Usage

```
model_get_offset(model)

## Default S3 method:
model_get_offset(model)
```

Arguments

`model` a model object

See Also

Other `model_helpers`: `model_compute_terms_contributions()`, `model_get_assign()`, `model_get_coefficients_type()`, `model_get_contrasts()`, `model_get_model_frame()`, `model_get_model_matrix()`, `model_get_model()`, `model_get_nlevels()`, `model_get_n()`, `model_get_response()`, `model_get_terms()`, `model_get_weights()`, `model_get_xlevels()`, `model_identify_variables()`, `model_list_contrasts()`, `model_list_terms_levels()`, `model_list_variables()`

Examples

```
mod <- glm(
  response ~ trt + offset(log(ttdeath)),
  gtsummary::trial,
  family = poisson
)
mod %>% model_get_offset()
```

model_get_response	<i>Get model response</i>
--------------------	---------------------------

Description

This function does not cover lavaan models (NULL is returned).

Usage

```
model_get_response(model)

## Default S3 method:
model_get_response(model)

## S3 method for class 'glm'
model_get_response(model)

## S3 method for class 'glmerMod'
model_get_response(model)
```

Arguments

model a model object

  model_get_response()

mod <- glm(
  response ~ stage * grade + trt,
  gtsummary::trial,
  family = binomial,
  contrasts = list(stage = contr.sum, grade = contr.treatment(3, 2), trt = "contr.SAS")
)
mod %>% model_get_response()

mod <- glm(
  Survived ~ Class * Age + Sex,
  data = Titanic %>% as.data.frame(),
  weights = Freq,
```

```

    family = binomial
  )
  mod %>% model_get_response()

  d <- dplyr::as_tibble(Titanic) %>%
    dplyr::group_by(Class, Sex, Age) %>%
    dplyr::summarise(
      n_survived = sum(n * (Survived == "Yes")),
      n_dead = sum(n * (Survived == "No"))
    )
  mod <- glm(cbind(n_survived, n_dead) ~ Class * Age + Sex, data = d, family = binomial, y = FALSE)
  mod %>% model_get_response()

```

model_get_terms	<i>Get the terms of a model</i>
-----------------	---------------------------------

Description

Return the result of `stats::terms()` applied to the model or NULL if it is not possible to get terms from model.

Usage

```

model_get_terms(model)

## Default S3 method:
model_get_terms(model)

## S3 method for class 'brmsfit'
model_get_terms(model)

## S3 method for class 'glmmTMB'
model_get_terms(model)

```

Arguments

model a model object

Details

For models fitted with `glmmTMB::glmmTMB()`, it will return a terms object taking into account all components ("cond" and "zi"). For a more restricted terms object, please refer to `glmmTMB::terms.glmmTMB()`.

See Also

`stats::terms()`

model_list_variables()
```

Examples

```
lm(hp ~ mpg + factor(cyl), mtcars) %>%
  model_get_terms()
```

model_get_weights	<i>Get sampling weights used by a model</i>
-------------------	---

Description

This function does not cover lavaan models (NULL is returned).

Usage

```
model_get_weights(model)

## Default S3 method:
model_get_weights(model)

## S3 method for class 'svyglm'
model_get_weights(model)
```

Arguments

model a model object

Examples

```
mod <- lm(Sepal.Length ~ Sepal.Width, iris)
mod %>% model_get_weights()

mod <- lm(hp ~ mpg + factor(cyl) + disp:hp, mtcars, weights = mtcars$gear)
mod %>% model_get_weights()

mod <- glm(
  response ~ stage * grade + trt,
  gtsummary::trial,
```

```

    family = binomial
  )
  mod %>% model_get_weights()

  mod <- glm(
    Survived ~ Class * Age + Sex,
    data = Titanic %>% as.data.frame(),
    weights = Freq,
    family = binomial
  )
  mod %>% model_get_weights()

  d <- dplyr::as_tibble(Titanic) %>%
    dplyr::group_by(Class, Sex, Age) %>%
    dplyr::summarise(
      n_survived = sum(n * (Survived == "Yes")),
      n_dead = sum(n * (Survived == "No"))
    )
  mod <- glm(cbind(n_survived, n_dead) ~ Class * Age + Sex, data = d, family = binomial)
  mod %>% model_get_weights()

```

model_get_xlevels *Get xlevels used in the model*

Description

Get xlevels used in the model

Usage

```

model_get_xlevels(model)

## Default S3 method:
model_get_xlevels(model)

## S3 method for class 'lmerMod'
model_get_xlevels(model)

## S3 method for class 'glmerMod'
model_get_xlevels(model)

## S3 method for class 'felm'
model_get_xlevels(model)

## S3 method for class 'brmsfit'
model_get_xlevels(model)

## S3 method for class 'glmmTMB'
model_get_xlevels(model)

```

Arguments

model a model object

See Also

Other model_helpers: [model_compute_terms_contributions\(\)](#), [model_get_assign\(\)](#), [model_get_coefficients_type\(\)](#), [model_get_contrasts\(\)](#), [model_get_model_frame\(\)](#), [model_get_model_matrix\(\)](#), [model_get_model\(\)](#), [model_get_nlevels\(\)](#), [model_get_n\(\)](#), [model_get_offset\(\)](#), [model_get_response\(\)](#), [model_get_terms\(\)](#), [model_get_weights\(\)](#), [model_identify_variables\(\)](#), [model_list_contrasts\(\)](#), [model_list_terms_levels\(\)](#), [model_list_variables\(\)](#)

Examples

```
lm(hp ~ mpg + factor(cyl), mtcars) %>%
  model_get_xlevels()
```

model_identify_variables

Identify for each coefficient of a model the corresponding variable

Description

It will also identify interaction terms and intercept(s).

Usage

```
model_identify_variables(model)

## Default S3 method:
model_identify_variables(model)

## S3 method for class 'lavaan'
model_identify_variables(model)

## S3 method for class 'aov'
model_identify_variables(model)

## S3 method for class 'clm'
model_identify_variables(model)

## S3 method for class 'clmm'
model_identify_variables(model)

## S3 method for class 'gam'
model_identify_variables(model)
```

Arguments

model a model object

Value

A tibble with four columns:

- term: coefficients of the model
- variable: the corresponding variable
- var_class: class of the variable (cf. `stats::.MFclass()`)
- var_type: "continuous", "dichotomous" (categorical variable with 2 levels), "categorical" (categorical variable with 3 or more levels), "intercept" or "interaction"
- var_nlevels: number of original levels for categorical variables

See Also

Other model_helpers: [model_compute_terms_contributions\(\)](#), [model_get_assign\(\)](#), [model_get_coefficients_type\(\)](#), [model_get_contrasts\(\)](#), [model_get_model_frame\(\)](#), [model_get_model_matrix\(\)](#), [model_get_model\(\)](#), [model_get_nlevels\(\)](#), [model_get_n\(\)](#), [model_get_offset\(\)](#), [model_get_response\(\)](#), [model_get_terms\(\)](#), [model_get_weights\(\)](#), [model_get_xlevels\(\)](#), [model_list_contrasts\(\)](#), [model_list_terms_levels\(\)](#), [model_list_variables\(\)](#)

Examples

```
Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes"))) %>%
  glm(
    Survived ~ Class + Age * Sex,
    data = ., weights = .$n,
    family = binomial
  ) %>%
  model_identify_variables()

iris %>%
  lm(
    Sepal.Length ~ poly(Sepal.Width, 2) + Species,
    data = .,
    contrasts = list(Species = contr.sum)
  ) %>%
  model_identify_variables()
```

model_list_contrasts *List contrasts used by a model*

Description

List contrasts used by a model

Usage

```
model_list_contrasts(model)
```

```
## Default S3 method:
model_list_contrasts(model)
```

Arguments

model a model object

Details

For models with no intercept, no contrasts will be applied to one of the categorical variable. In such case, one dummy term will be returned for each level of the categorical variable.

Value

A tibble with three columns:

- variable: variable name
- contrasts: contrasts used
- contrasts_type: type of contrasts ("treatment", "sum", "poly", "helmert", "other" or "no.contrast")
- reference: for variables with treatment, SAS or sum contrasts, position of the reference level

Other model_helpers: [model_compute_terms_contributions\(\)](#), [model_get_assign\(\)](#), [model_get_coefficients_type\(\)](#), [model_get_contrasts\(\)](#), [model_get_model_frame\(\)](#), [model_get_model_matrix\(\)](#), [model_get_model\(\)](#), [model_get_nlevels\(\)](#), [model_get_n\(\)](#), [model_get_offset\(\)](#), [model_get_response\(\)](#), [model_get_terms\(\)](#), [model_get_weights\(\)](#), [model_get_xlevels\(\)](#), [model_identify_variables\(\)](#), [model_list_terms_levels\(\)](#), [model_list_variables\(\)](#)

Examples

```
glm(
  am ~ mpg + factor(cyl),
  data = mtcars,
  family = binomial,
  contrasts = list(`factor(cyl)` = contr.sum)
) %>%
  model_list_contrasts()
```

`model_list_terms_levels`*List levels of categorical terms*

Description

Only for categorical variables with treatment, SAS or sum contrasts, and categorical variables with no contrast.

Usage

```
model_list_terms_levels(  
  model,  
  label_pattern = "{level}",  
  variable_labels = NULL  
)  
  
## Default S3 method:  
model_list_terms_levels(  
  model,  
  label_pattern = "{level}",  
  variable_labels = NULL  
)
```

Arguments

`model` a model object

`label_pattern` a [glue pattern](#) for term labels (see examples)

`variable_labels` an optional named list or named vector of custom variable labels passed to [model_list_variables\(\)](#)

Value

A tibble with ten columns:

- `variable`: variable
- `contrasts_type`: type of contrasts ("sum" or "treatment")
- `term`: term name
- `level`: term level
- `level_rank`: rank of the level
- `reference`: logical indicating which term is the reference level
- `reference_level`: level of the reference term
- `var_label`: variable label obtained with [model_list_variables\(\)](#)

- var_nlevels: number of levels in this variable
- dichotomous: logical indicating if the variable is dichotomous
- label: term label (by default equal to term level) The first nine columns can be used in label_pattern.

Examples

```
glm(
  am ~ mpg + factor(cyl),
  data = mtcars,
  family = binomial,
  contrasts = list(`factor(cyl)` = contr.sum)
) %>%
  model_list_terms_levels()

df <- Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes")))

mod <- df %>%
  glm(
    Survived ~ Class + Age + Sex,
    data = ., weights = .$n, family = binomial,
    contrasts = list(Age = contr.sum, Class = "contr.helmert")
  )
mod %>% model_list_terms_levels()
mod %>% model_list_terms_levels("{level} vs {reference_level}")
mod %>% model_list_terms_levels("{variable} [{level} - {reference_level}]")
mod %>% model_list_terms_levels(
  "{ifelse(reference, level, paste(level, '-', reference_level))}"
)
```

model_list_variables *List all the variables used in a model*

Description

Including variables used only in an interaction.

Usage

```

model_list_variables(model, labels = NULL, only_variable = FALSE)

## Default S3 method:
model_list_variables(model, labels = NULL, only_variable = FALSE)

## S3 method for class 'lavaan'
model_list_variables(model, labels = NULL, only_variable = FALSE)

```

Arguments

```

model          a model object
labels         an optional named list or named vector of custom variable labels
only_variable  if TRUE, will return only "variable" column

```

Value

A tibble with three columns:

- `variable`: the corresponding variable
- `var_class`: class of the variable (cf. `stats::.MFclass()`)
- `label_attr`: variable label defined in the original data frame with the label attribute (cf. `labelled::var_label()`)
- `var_label`: a variable label (by priority, labels if defined, label_attr if available, otherwise variable)

Examples

```

Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes"))) %>%
  glm(
    Survived ~ Class + Age : Sex,
    data = ., weights = .$n,
    family = binomial
  ) %>%
  model_list_variables()

iris %>%
  lm(
    Sepal.Length ~ poly(Sepal.Width, 2) + Species,

```

```
      data = .,
      contrasts = list(Species = contr.sum)
    ) %>%
    model_list_variables()

if (requireNamespace("gtsummary")) {
  glm(
    response ~ poly(age, 3) + stage + grade * trt,
    na.omit(gtsummary::trial),
    family = binomial,
  ) %>%
  model_list_variables()
}
```

select_helpers

Select helper functions

Description

Set of functions to supplement the tidyselect set of functions for selecting columns of data frames (and other items as well).

- `all_continuous()` selects continuous variables
- `all_categorical()` selects categorical (including "dichotomous") variables
- `all_dichotomous()` selects only type "dichotomous"
- `all_interaction()` selects interaction terms from a regression model
- `all_intercepts()` selects intercept terms from a regression model
- `all_contrasts()` selects variables in regression model based on their type of contrast

Usage

```
all_continuous()
```

```
all_dichotomous()
```

```
all_categorical(dichotomous = TRUE)
```

```
all_interaction()
```

```
all_ran_pars()
```

```
all_ran_vals()
```

```
all_intercepts()
```

```
all_contrasts(contrasts_type = NULL)
```

Arguments

`dichotomous` Logical indicating whether to include dichotomous variables. Default is TRUE

`contrasts_type` type of contrast to select. When NULL, all variables with a contrast will be selected. Default is NULL. Select among contrast types `c("treatment", "sum", "poly", "helmert", "other")`

Value

A character vector of column names selected

Examples

```
glm(response ~ age * trt + grade, gtsummary::trial, family = binomial) %>%
  tidy_plus_plus(exponentiate = TRUE, include = all_categorical())

glm(response ~ age + trt + grade + stage,
  gtsummary::trial,
  family = binomial,
  contrasts = list(trt = contr.SAS, grade = contr.sum, stage = contr.poly)) %>%
  tidy_plus_plus(exponentiate = TRUE,
    include = all_contrasts(c("treatment", "sum")))
```

`tidy_add_coefficients_type`

Add coefficients type and label as attributes

Description

Add the type of coefficients ("generic", "logistic", "poisson", "relative_risk" or "prop_hazard") and the corresponding coefficient labels, as attributes to `x` (respectively named `coefficients_type` and `coefficients_label`).

Usage

```
tidy_add_coefficients_type(
  x,
  exponentiate = attr(x, "exponentiate"),
  model = tidy_get_model(x)
)
```

Arguments

`x` a tidy tibble

`exponentiate` logical indicating whether or not to exponentiate the coefficient estimates. It should be consistent with the original call to `broom::tidy()`

`model` the corresponding model, if not attached to `x`

See Also

Examples

```
ex1 <- lm(hp ~ mpg + factor(cyl), mtcars) %>%
  tidy_and_attach() %>%
  tidy_add_coefficients_type()
attr(ex1, "coefficients_type")
attr(ex1, "coefficients_label")

ex2 <- Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes"))) %>%
  glm(Survived ~ Class + Age * Sex, data = ., weights = .$n, family = binomial) %>%
  tidy_and_attach(exponentiate = TRUE) %>%
  tidy_add_coefficients_type()
attr(ex2, "coefficients_type")
attr(ex2, "coefficients_label")
```

tidy_add_contrasts	<i>Add contrasts type for categorical variables</i>
--------------------	---

Description

Add a contrasts column corresponding to contrasts used for a categorical variable and a contrasts_type column equal to "treatment", "sum", "poly", "helmert", "other" or "no.contrast".

Usage

```
tidy_add_contrasts(x, model = tidy_get_model(x), quiet = FALSE)
```

Arguments

x	a tidy tibble
model	the corresponding model, if not attached to x
quiet	logical argument whether broom.helpers should not return a message when tidy_disambiguate_terms() was already applied

Details

If the variable column is not yet available in x, [tidy_identify_variables\(\)](#) will be automatically applied.

See Also

Other tidy_helpers: [tidy_add_coefficients_type\(\)](#), [tidy_add_estimate_to_reference_rows\(\)](#), [tidy_add_header_rows\(\)](#), [tidy_add_n\(\)](#), [tidy_add_reference_rows\(\)](#), [tidy_add_term_labels\(\)](#), [tidy_add_variable_labels\(\)](#), [tidy_attach_model\(\)](#), [tidy_disambiguate_terms\(\)](#), [tidy_identify_variables\(\)](#), [tidy_plus_plus\(\)](#), [tidy_remove_intercept\(\)](#), [tidy_select_variables\(\)](#)

Examples

```
df <- Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes")))

df %>%
  glm(
    Survived ~ Class + Age + Sex,
    data = ., weights = .$n, family = binomial,
    contrasts = list(Age = contr.sum, Class = "contr.helmert")
  ) %>%
  tidy_and_attach() %>%
  tidy_add_contrasts()
```

tidy_add_estimate_to_reference_rows

Add an estimate value to references rows for categorical variables

Description

For categorical variables with a treatment contrast ([stats::contr.treatment\(\)](#)) or a SAS contrast ([stats::contr.SAS\(\)](#)) will add an estimate equal to θ (or 1 if `exponentiate = TRUE`) to the reference row.

Usage

```
tidy_add_estimate_to_reference_rows(
  x,
  exponentiate = attr(x, "exponentiate"),
  model = tidy_get_model(x),
  quiet = FALSE
)
```

Arguments

x	a tidy tibble
exponentiate	logical indicating whether or not to exponentiate the coefficient estimates. It should be consistent with the original call to broom::tidy()
model	the corresponding model, if not attached to x
quiet	logical argument whether broom.helpers should not return a message when requested output cannot be generated. Default is FALSE

Details

For categorical variables with a sum contrast (`stats::contr.sum()`), the estimate value of the reference row will be equal to the sum of all other coefficients multiplied by -1 (eventually exponentiated if `exponentiate = TRUE`), and obtained with `emmeans::emmeans()`. The `emmeans` package should therefore be installed. For sum contrasts, the model coefficient corresponds to the difference of each level with the grand mean.

For other variables, no change will be made.

If the `reference_row` column is not yet available in `x`, `tidy_add_reference_rows()` will be automatically applied.

Examples

```
df <- Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(dplyr::across(where(is.character), factor))

df %>%
  glm(
    Survived ~ Class + Age + Sex,
    data = ., weights = .$n, family = binomial,
    contrasts = list(Age = contr.sum, Class = "contr.SAS")
  ) %>%
  tidy_and_attach(exponentiate = TRUE) %>%
  tidy_add_reference_rows() %>%
  tidy_add_estimate_to_reference_rows()

if (requireNamespace("gtsummary")) {
  glm(
    response ~ stage + grade * trt,
    gtsummary::trial,
    family = binomial,
    contrasts = list(
      stage = contr.treatment(4, base = 3),
      grade = contr.treatment(3, base = 2),
      trt = contr.treatment(2, base = 2)
    )
  ) %>%
  tidy_and_attach() %>%
  tidy_add_reference_rows() %>%
  tidy_add_estimate_to_reference_rows()
}
```

`tidy_add_header_rows` *Add header rows variables with several terms*

Description

For variables with several terms (usually categorical variables but could also be the case of continuous variables with polynomial terms or splines), `tidy_add_header_rows()` will add an additional row per variable, where `label` will be equal to `var_label`. These additional rows could be identified with `header_row` column.

Usage

```
tidy_add_header_rows(
  x,
  show_single_row = NULL,
  model = tidy_get_model(x),
  quiet = FALSE,
  strict = FALSE
)
```

Arguments

<code>x</code>	a tidy tibble
<code>show_single_row</code>	a vector indicating the names of binary variables that should be displayed on a single row. Accepts <code>tidyselect</code> syntax. Default is <code>NULL</code> . See also all_dichotomous()
<code>model</code>	the corresponding model, if not attached to <code>x</code>
<code>quiet</code>	logical argument whether broom.helpers should not return a message when requested output cannot be generated. Default is <code>FALSE</code>
<code>strict</code>	logical argument whether broom.helpers should return an error when requested output cannot be generated. Default is <code>FALSE</code>

Details

The `show_single_row` argument allows to specify a list of dichotomous variables that should be displayed on a single row instead of two rows.

The added `header_row` column will be equal to:

- `TRUE` for an header row;
- `FALSE` for a normal row of a variable with an header row;
- `NA` for variables without an header row.

If the `label` column is not yet available in `x`, [tidy_add_term_labels\(\)](#) will be automatically applied.

```
df <- Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes")))

res <- df %>%
  glm(
    Survived ~ Class + Age + Sex,
    data = ., weights = .$n, family = binomial,
    contrasts = list(Age = contr.sum, Class = "contr.SAS")
  ) %>%
  tidy_and_attach() %>%
  tidy_add_variable_labels(labels = list(Class = "Custom label for Class")) %>%
  tidy_add_reference_rows()
res %>% tidy_add_header_rows()
res %>% tidy_add_header_rows(show_single_row = all_dichotomous())

if (requireNamespace("gtsummary")) {
  glm(
    response ~ stage + grade * trt,
    gtsummary::trial,
    family = binomial,
    contrasts = list(
      stage = contr.treatment(4, base = 3),
      grade = contr.treatment(3, base = 2),
      trt = contr.treatment(2, base = 2)
    )
  ) %>%
  tidy_and_attach() %>%
  tidy_add_reference_rows() %>%
  tidy_add_header_rows()
}
```

tidy_add_n

Add the (weighted) number of observations

Description

Add the number of observations in a new column `n_obs`, taking into account any weights if they have been defined.

Usage

```
tidy_add_n(x, model = tidy_get_model(x))
```

Arguments

x	a tidy tibble
model	the corresponding model, if not attached to x

Details

For continuous variables, it corresponds to all valid observations contributing to the model.

For categorical variables coded with treatment or sum contrasts, each model term could be associated to only one level of the original categorical variable. Therefore, `n_obs` will correspond to the number of observations associated with that level. `n_obs` will also be computed for reference rows. For polynomial contrasts (defined with `stats::contr.poly()`), all levels will contribute to the computation of each model term. Therefore, `n_obs` will be equal to the total number of observations. For Helmert and custom contrasts, only rows contributing positively (i.e. with a positive contrast) to the computation of a term will be considered for estimating `n_obs`. The result could therefore be difficult to interpret. For a better understanding of which observations are taken into account to compute `n_obs` values, you could look at `model_compute_terms_contributions()`.

For interaction terms, only rows contributing to all the terms of the interaction will be considered to compute `n_obs`.

For binomial logistic models, `tidy_add_n()` will also return the corresponding number of events (`n_event`) for each term, taking into account any defined weights. Observed proportions could be obtained as `n_obs / n_event`.

Similarly, a number of events will be computed for multinomial logistic models (`nnet::multinom()`) for each level of the outcome (`y.level`), corresponding to the number of observations equal to that outcome level.

For Poisson models, `n_event` will be equal to the number of counts per term. In addition, a third column `exposure` will be computed. If no offset is defined, `exposure` is assumed to be equal to 1 (eventually multiplied by weights) per observation. If an offset is defined, `exposure` will be equal to the (weighted) sum of the exponential of the offset (as a reminder, to model the effect of `x` on the ratio `y / z`, a Poisson model will be defined as `glm(y ~ x + offset(log(z)), family = poisson)`). Observed rates could be obtained with `n_event / exposure`.

For Cox models (`survival::coxph()`), an individual could be coded with several observations (several rows). `n_obs` will correspond to the weighted number of observations which could be different from the number of individuals. `tidy_add_n()` will also compute a (weighted) number of events (`n_events`) according to the definition of the `survival::Surv()` object. `Exposure` time is also returned in `exposure` column. It is equal to the (weighted) sum of the time variable if only one variable time is passed to `survival::Surv()`, and to the (weighted) sum of `time2 - time` if two time variables are defined in `survival::Surv()`.

The (weighted) total number of observations (`N_obs`), of events (`N_event`) and of exposure time (`Exposure`) are stored as attributes of the returned tibble.

```

```

gtsummary::trial,
family = poisson
) %>%
tidy_and_attach() %>%
tidy_add_n()

```

tidy_add_reference_rows

Add references rows for categorical variables

Description

For categorical variables with a treatment contrast (`stats::contr.treatment()`), a SAS contrast (`stats::contr.SAS()`) or a sum contrast (`stats::contr.sum()`), add a reference row.

Usage

```

tidy_add_reference_rows(
  x,
  no_reference_row = NULL,
  model = tidy_get_model(x),
  quiet = FALSE
)

```

Arguments

<code>x</code>	a tidy tibble
<code>no_reference_row</code>	a vector indicating the name of variables for those no reference row should be added. Accepts <code>tidyselect</code> syntax. Default is <code>NULL</code> . See also <code>all_categorical()</code> and <code>all_dichotomous()</code>
<code>model</code>	the corresponding model, if not attached to <code>x</code>
<code>quiet</code>	logical argument whether broom.helpers should not return a message when requested output cannot be generated. Default is <code>FALSE</code>

Details

The added `reference_row` column will be equal to:

- `TRUE` for a reference row;
- `FALSE` for a normal row of a variable with a reference row;
- `NA` for variables without a reference row.

If the `contrasts` column is not yet available in `x`, `tidy_add_contrasts()` will be automatically applied.

`tidy_add_reference_rows()` will not populate the label of the reference term. It is therefore better to apply `tidy_add_term_labels()` after `tidy_add_reference_rows()` rather than before. Similarly, it is better to apply `tidy_add_reference_rows()` before `tidy_add_n()`.

Other tidy_helpers: [tidy_add_coefficients_type\(\)](#), [tidy_add_contrasts\(\)](#), [tidy_add_estimate_to_reference_row\(\)](#), [tidy_add_header_rows\(\)](#), [tidy_add_n\(\)](#), [tidy_add_term_labels\(\)](#), [tidy_add_variable_labels\(\)](#), [tidy_attach_model\(\)](#), [tidy_disambiguate_terms\(\)](#), [tidy_identify_variables\(\)](#), [tidy_plus_plus\(\)](#), [tidy_remove_intercept\(\)](#), [tidy_select_variables\(\)](#)

Examples

```
df <- Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes")))

res <- df %>%
  glm(
    Survived ~ Class + Age + Sex,
    data = ., weights = .$n, family = binomial,
    contrasts = list(Age = contr.sum, Class = "contr.SAS")
  ) %>%
  tidy_and_attach()
res %>% tidy_add_reference_rows()
res %>% tidy_add_reference_rows(no_reference_row = all_dichotomous())
res %>% tidy_add_reference_rows(no_reference_row = "Class")

if (requireNamespace("gtsummary")) {
  glm(
    response ~ stage + grade * trt,
    gtsummary::trial,
    family = binomial,
    contrasts = list(
      stage = contr.treatment(4, base = 3),
      grade = contr.treatment(3, base = 2),
      trt = contr.treatment(2, base = 2)
    )
  ) %>%
  tidy_and_attach() %>%
  tidy_add_reference_rows()
}
```

`tidy_add_term_labels` *Add term labels*

Description

Will add term labels in a label column, based on:

1. labels provided in labels argument if provided;
2. factor levels for categorical variables coded with treatment, SAS or sum contrasts (the label could be customized with `categorical_terms_pattern` argument);
3. variable labels when there is only one term per variable;
4. term name otherwise.

Usage

```
tidy_add_term_labels(
  x,
  labels = NULL,
  interaction_sep = " * ",
  categorical_terms_pattern = "{level}",
  model = tidy_get_model(x),
  quiet = FALSE,
  strict = FALSE
)
```

Arguments

<code>x</code>	a tidy tibble
<code>labels</code>	an optional named list or named vector of custom term labels
<code>interaction_sep</code>	separator for interaction terms
<code>categorical_terms_pattern</code>	a glue pattern for labels of categorical terms with treatment or sum contrasts (see examples and model_list_terms_levels())
<code>model</code>	the corresponding model, if not attached to <code>x</code>
<code>quiet</code>	logical argument whether broom.helpers should not return a message when requested output cannot be generated. Default is FALSE
<code>strict</code>	logical argument whether broom.helpers should return an error when requested output cannot be generated. Default is FALSE

Details

If the `variable_label` column is not yet available in `x`, [tidy_add_variable_labels\(\)](#) will be automatically applied. If the `contrasts` column is not yet available in `x`, [tidy_add_contrasts\(\)](#) will be automatically applied.

It is possible to pass a custom label for any term in `labels`, including interaction terms.

See Also

Other tidy_helpers: [tidy_add_coefficients_type\(\)](#), [tidy_add_contrasts\(\)](#), [tidy_add_estimate_to_reference_rows\(\)](#), [tidy_add_header_rows\(\)](#), [tidy_add_n\(\)](#), [tidy_add_reference_rows\(\)](#), [tidy_add_variable_labels\(\)](#), [tidy_attach_model\(\)](#), [tidy_disambiguate_terms\(\)](#), [tidy_identify_variables\(\)](#), [tidy_plus_plus\(\)](#), [tidy_remove_intercept\(\)](#), [tidy_select_variables\(\)](#)

Examples

```
df <- Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes"))) %>%
  labelled::set_variable_labels(
    Class = "Passenger's class",
```

```

      Sex = "Sex"
    )

mod <- df %>%
  glm(Survived ~ Class * Age * Sex, data = ., weights = .$n, family = binomial)
mod %>%
  tidy_and_attach() %>%
  tidy_add_term_labels()
mod %>%
  tidy_and_attach() %>%
  tidy_add_term_labels(
    interaction_sep = " x ",
    categorical_terms_pattern = "{level} / {reference_level}"
  )

```

tidy_add_variable_labels

Add variable labels

Description

Will add variable labels in a `var_label` column, based on:

1. labels provided in `labels` argument if provided;
2. variable labels defined in the original data frame with the `label` attribute (cf. `labelled::var_label()`);
3. variable name otherwise.

Usage

```

tidy_add_variable_labels(
  x,
  labels = NULL,
  interaction_sep = " * ",
  model = tidy_get_model(x),
  quiet = FALSE,
  strict = FALSE
)

```

Arguments

<code>x</code>	a tidy tibble
<code>labels</code>	an optional named list or named vector of custom variable labels
<code>interaction_sep</code>	separator for interaction terms
<code>model</code>	the corresponding model, if not attached to <code>x</code>
<code>quiet</code>	logical argument whether <code>broom.helpers</code> should not return a message when requested output cannot be generated. Default is <code>FALSE</code>
<code>strict</code>	logical argument whether <code>broom.helpers</code> should return an error when requested output cannot be generated. Default is <code>FALSE</code>

Details

If the variable column is not yet available in `x`, `tidy_identify_variables()` will be automatically applied.

It is possible to pass a custom label for an interaction term in `labels` (see examples).

See Also

Other tidy_helpers: `tidy_add_coefficients_type()`, `tidy_add_contrasts()`, `tidy_add_estimate_to_reference_rows()`, `tidy_add_header_rows()`, `tidy_add_n()`, `tidy_add_reference_rows()`, `tidy_add_term_labels()`, `tidy_attach_model()`, `tidy_disambiguate_terms()`, `tidy_identify_variables()`, `tidy_plus_plus()`, `tidy_remove_intercept()`, `tidy_select_variables()`

Examples

```
df <- Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived, c("No", "Yes"))) %>%
  labelled::set_variable_labels(
    Class = "Passenger's class",
    Sex = "Sex"
  )

df %>%
  glm(Survived ~ Class * Age * Sex, data = ., weights = .$n, family = binomial) %>%
  tidy_and_attach() %>%
  tidy_add_variable_labels(
    labels = list(
      "(Intercept)" = "Custom intercept",
      Sex = "Gender",
      "Class:Age" = "Custom label"
    )
  )
```

<code>tidy_attach_model</code>	<i>Attach a full model to the tibble of model terms</i>
--------------------------------	---

Description

To facilitate the use of broom helpers with pipe, it is recommended to attach the original model as an attribute to the tibble of model terms generated by `broom::tidy()`.

Usage

```
tidy_attach_model(x, model, .attributes = NULL)

tidy_and_attach(
  model,
  tidy_fun = tidy_with_broom_or_parameters,
```

```

    exponentiate = FALSE,
    ...
  )

tidy_get_model(x)

tidy_detach_model(x)

```

Arguments

x	a tibble of model terms
model	a model to be attached/tidied
.attributes	named list of additional attributes to be attached to x
tidy_fun	option to specify a custom tidier function
exponentiate	logical indicating whether or not to exponentiate the coefficient estimates. This is typical for logistic, Poisson and Cox models, but a bad idea if there is no log or logit link; defaults to FALSE
...	other arguments passed to tidy_fun()

Details

tidy_attach_model() attach the model to a tibble already generated while tidy_and_attach() will apply broom::tidy() and attach the model.

Use tidy_get_model() to get the model attached to the tibble and tidy_detach_model() to remove the attribute containing the model.

See Also

Other tidy_helpers: [tidy_add_coefficients_type\(\)](#), [tidy_add_contrasts\(\)](#), [tidy_add_estimate_to_reference_row\(\)](#), [tidy_add_header_rows\(\)](#), [tidy_add_n\(\)](#), [tidy_add_reference_rows\(\)](#), [tidy_add_term_labels\(\)](#), [tidy_add_variable_labels\(\)](#), [tidy_disambiguate_terms\(\)](#), [tidy_identify_variables\(\)](#), [tidy_plus_plus\(\)](#), [tidy_remove_intercept\(\)](#), [tidy_select_variables\(\)](#)

Examples

```

mod <- lm(Sepal.Length ~ Sepal.Width + Species, data = iris)
tt <- mod %>%
  tidy_and_attach(conf.int = TRUE)
tt
tidy_get_model(tt)

```

tidy_disambiguate_terms

Disambiguate terms

Description

For mixed models, the term column returned by `broom.mixed` may have duplicated values for random-effect parameters and random-effect values. In such case, the terms could be disambiguated by prefixing them with the value of the group column. `tidy_disambiguate_terms()` will not change any term if there is no group column in `x`. The original term value is kept in a new column `original_term`.

Usage

```
tidy_disambiguate_terms(x, sep = ".", model = tidy_get_model(x), quiet = FALSE)
```

Arguments

<code>x</code>	a tidy tibble
<code>sep</code>	character, separator added between group name and term
<code>model</code>	the corresponding model, if not attached to <code>x</code>
<code>quiet</code>	logical argument whether <code>broom.helpers</code> should not return a message when requested output cannot be generated. Default is <code>FALSE</code>

See Also

Other `tidy_helpers`: [tidy_add_coefficients_type\(\)](#), [tidy_add_contrasts\(\)](#), [tidy_add_estimate_to_reference_rows\(\)](#), [tidy_add_header_rows\(\)](#), [tidy_add_n\(\)](#), [tidy_add_reference_rows\(\)](#), [tidy_add_term_labels\(\)](#), [tidy_add_variable_labels\(\)](#), [tidy_attach_model\(\)](#), [tidy_identify_variables\(\)](#), [tidy_plus_plus\(\)](#), [tidy_remove_intercept\(\)](#), [tidy_select_variables\(\)](#)

Examples

```
if (require(lme4) & require(broom.mixed) & require(gtsummary)) {
  mod <- lme4::lmer(marker ~ stage + (1|grade) + (death|response), trial)
  mod %>% tidy_and_attach() %>% tidy_disambiguate_terms()
}
```

`tidy_identify_variables`*Identify the variable corresponding to each model coefficient*

Description

`tidy_identify_variables()` will add to the tidy tibble three additional columns: `variable`, `var_class`, `var_type` and `var_nlevels`.

Usage

```
tidy_identify_variables(x, model = tidy_get_model(x), quiet = FALSE)
```

Arguments

<code>x</code>	a tidy tibble
<code>model</code>	the corresponding model, if not attached to <code>x</code>
<code>quiet</code>	logical argument whether broom.helpers should not return a message when requested output cannot be generated. Default is FALSE

Details

It will also identify interaction terms and intercept(s).

`var_type` could be:

- "continuous",
- "dichotomous" (categorical variable with 2 levels),
- "categorical" (categorical variable with 3 levels or more),
- "intercept"
- "interaction"
- "ran_pars" (random-effect parameters for mixed models)
- "ran_vals" (random-effect values for mixed models)
- "unknown" in the rare cases where `tidy_identify_variables()` will fail to identify the list of variables

For dichotomous and categorical variables, `var_nlevels` corresponds to the number of original levels in the corresponding variables.

  tidy_identify_variables()

lm(
  Sepal.Length ~ poly(Sepal.Width, 2) + Species,
  data = iris,
  contrasts = list(Species = contr.sum)
) %>%
  tidy_and_attach(conf.int = TRUE) %>%
  tidy_identify_variables()
```

tidy_parameters

Tidy a model with parameters package

Description

Use `parameters::model_parameters()` to tidy a model and apply `parameters::standardize_names(style = "broom")` to the output

Usage

```
tidy_parameters(x, conf.int = TRUE, conf.level = 0.95, ...)
```

Arguments

<code>x</code>	a model
<code>conf.int</code>	logical indicating whether or not to include a confidence interval in the tidied output
<code>conf.level</code>	the confidence level to use for the confidence interval
<code>...</code>	additional parameters passed to <code>parameters::model_parameters()</code>

See Also

Other custom_tieders: [tidy_with_broom_or_parameters\(\)](#)

Examples

```
if (require(parameters)) {
  lm(Sepal.Length ~ Sepal.Width + Species, data = iris) %>%
    tidy_parameters()
}
```

tidy_plus_plus	<i>Tidy a model and compute additional informations</i>
----------------	---

Description

This function will apply sequentially:

- `tidy_and_attach()`
- `tidy_disambiguate_terms()`
- `tidy_identify_variables()`
- `tidy_add_contrasts()`
- `tidy_add_reference_rows()`
- `tidy_add_estimate_to_reference_rows()`
- `tidy_add_variable_labels()`
- `tidy_add_term_labels()`
- `tidy_add_header_rows()`
- `tidy_add_n()`
- `tidy_remove_intercept()`
- `tidy_select_variables()`
- `tidy_add_coefficients_type()`
- `tidy_detach_model()`

Usage

```
tidy_plus_plus(  
  model,  
  tidy_fun = tidy_with_broom_or_parameters,  
  conf.int = TRUE,  
  exponentiate = FALSE,  
  variable_labels = NULL,  
  term_labels = NULL,  
  interaction_sep = " * ",  
  categorical_terms_pattern = "{level}",  
  disambiguate_terms = TRUE,  
  disambiguate_sep = ".",  
  add_reference_rows = TRUE,  
  no_reference_row = NULL,  
  add_estimate_to_reference_rows = TRUE,  
  add_header_rows = FALSE,  
  show_single_row = NULL,  
  add_n = TRUE,  
  intercept = FALSE,  
  include = everything(),
```

```

  keep_model = FALSE,
  quiet = FALSE,
  strict = FALSE,
  ...
)

```

Arguments

<code>model</code>	a model to be attached/tidied
<code>tidy_fun</code>	option to specify a custom tidier function
<code>conf.int</code>	should confidence intervals be computed? (see broom::tidy())
<code>exponentiate</code>	logical indicating whether or not to exponentiate the coefficient estimates. This is typical for logistic, Poisson and Cox models, but a bad idea if there is no log or logit link; defaults to FALSE.
<code>variable_labels</code>	a named list or a named vector of custom variable labels
<code>term_labels</code>	a named list or a named vector of custom term labels
<code>interaction_sep</code>	separator for interaction terms
<code>categorical_terms_pattern</code>	a glue pattern for labels of categorical terms with treatment or sum contrasts (see model_list_terms_levels())
<code>disambiguate_terms</code>	should terms be disambiguated with tidy_disambiguate_terms() ? (default TRUE)
<code>disambiguate_sep</code>	separator for tidy_disambiguate_terms()
<code>add_reference_rows</code>	should reference rows be added?
<code>no_reference_row</code>	variables (accepts tidyselect notation) for those no reference row should be added, when <code>add_reference_rows = TRUE</code>
<code>add_estimate_to_reference_rows</code>	should an estimate value be added to reference rows?
<code>add_header_rows</code>	should header rows be added?
<code>show_single_row</code>	variables that should be displayed on a single row (accepts tidyselect notation), when <code>add_header_rows</code> is TRUE
<code>add_n</code>	should the number of observations be added?
<code>intercept</code>	should the intercept(s) be included?
<code>include</code>	variables to include. Accepts tidyselect syntax. Use <code>-</code> to remove a variable. Default is <code>everything()</code> . See also all_continuous() , all_categorical() , all_dichotomous() and all_interaction()
<code>keep_model</code>	should the model be kept as an attribute of the final result?

quiet	logical argument whether broom.helpers should not return a message when requested output cannot be generated. Default is FALSE
strict	logical argument whether broom.helpers should return an error when requested output cannot be generated. Default is FALSE
...	other arguments passed to tidy_fun()

Examples

```
ex1 <- lm(Sepal.Length ~ Sepal.Width + Species, data = iris) %>%
  tidy_plus_plus()
ex1

df <- Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(
    Survived = factor(Survived, c("No", "Yes"))
  ) %>%
  labelled::set_variable_labels(
    Class = "Passenger's class",
    Sex = "Gender"
  )

ex2 <- glm(
  Survived ~ Class + Age * Sex,
  data = df, weights = df$n,
  family = binomial
) %>%
  tidy_plus_plus(
    exponentiate = TRUE,
    add_reference_rows = FALSE,
    categorical_terms_pattern = "{level} / {reference_level}",
    add_n = TRUE
  )
ex2

## Not run:
if (requireNamespace("gtsummary")) {
  ex3 <- glm(
    response ~ poly(age, 3) + stage + grade * trt,
    na.omit(gtsummary::trial),
    family = binomial,
    contrasts = list(
      stage = contr.treatment(4, base = 3),
      grade = contr.sum
    )
  )
}
```

```

)
) %>%

    exponentiate = TRUE,
    variable_labels = c(age = "Age (in years)"),
    add_header_rows = TRUE,
    show_single_row = all_dichotomous(),
    term_labels = c("poly(age, 3)3" = "Cubic age"),
    keep_model = TRUE
  )
ex3
}

## End(Not run)

```

`tidy_remove_intercept` *Remove intercept(s)*

Description

Will remove terms where `var_type == "intercept"`.

Usage

```
tidy_remove_intercept(x, model = tidy_get_model(x))
```

Arguments

<code>x</code>	a tidy tibble
<code>model</code>	the corresponding model, if not attached to <code>x</code>

Details

If the variable column is not yet available in `x`, [tidy_identify_variables\(\)](#) will be automatically applied.

See Also

Examples

```
Titanic %>%
  dplyr::as_tibble() %>%
  dplyr::mutate(Survived = factor(Survived)) %>%
  glm(Survived ~ Class + Age + Sex, data = ., weights = .$n, family = binomial) %>%
  tidy_and_attach() %>%
  tidy_remove_intercept()
```

`tidy_select_variables` *Select variables to keep/drop*

Description

Will remove unselected variables from the results. To remove the intercept, use `tidy_remove_intercept()`.

Usage

```
tidy_select_variables(x, include = everything(), model = tidy_get_model(x))
```

Arguments

<code>x</code>	a tidy tibble
<code>include</code>	variables to include. Accepts <code>tidyselect</code> syntax. Use <code>-</code> to remove a variable. Default is <code>everything()</code> . See also <code>all_continuous()</code> , <code>all_categorical()</code> , <code>all_dichotomous()</code> and <code>all_interaction()</code>
<code>model</code>	the corresponding model, if not attached to <code>x</code>

Details

If the variable column is not yet available in `x`, `tidy_identify_variables()` will be automatically applied.

  glm(Survived ~ Class + Age * Sex, data = ., weights = .$n, family = binomial) %>%
  tidy_and_attach() %>%
  tidy_identify_variables()
```

```
res
res %>% tidy_select_variables()
res %>% tidy_select_variables(include = "Class")
res %>% tidy_select_variables(include = -c("Age", "Sex"))
res %>% tidy_select_variables(include = starts_with("A"))
res %>% tidy_select_variables(include = all_categorical())
res %>% tidy_select_variables(include = all_dichotomous())
res %>% tidy_select_variables(include = all_interaction())
res %>% tidy_select_variables(
  include = c("Age", all_categorical(dichotomous = FALSE), all_interaction())
)
```

tidy_with_broom_or_parameters

Tidy a model with broom or parameters

Description

Try to tidy a model with broom: `tidy()`. If it fails, will try to tidy the model using parameters: `model_parameters()` through `tidy_parameters()`.

Usage

```
tidy_with_broom_or_parameters(x, conf.int = TRUE, conf.level = 0.95, ...)
```

Arguments

<code>x</code>	a model
<code>conf.int</code>	logical indicating whether or not to include a confidence interval in the tidied output
<code>conf.level</code>	the confidence level to use for the confidence interval
<code>...</code>	additional parameters passed to broom: <code>tidy()</code> or parameters: <code>model_parameters()</code>
